AuditED   AuditED AI

NEWSLETTER #3
# AUDITED & AUDITED AI

KEY PROGRESS IN THE AUDITED PROJECT

The consortium continues advancing the development of the EQAVET–ISO 21001 Online Auditing Tool. Over the past months, the team has completed the design specifications, including the preparatory checklist and core audit structure, and has already developed the first functional version of the tool.

We are now working on its internal validation, ensuring alignment with EQAVET and ISO 21001 and preparing the platform for the next stage: improvement and publication.

AUDITED-AI: INTEGRATING ARTIFICIAL INTELLIGENCE INTO DIGITAL AUDITING

The AUDITED-AI team is progressing with the development of its AI-powered prototype, designed to support evidence analysis and generate structured improvement suggestions. New training materials and micro-learning resources on responsible AI use in VET quality assurance are also underway and will be available soon.

NEXT STEPS

AUDITED and **AUDITED-AI** continue to be presented across European networks focused on VET innovation and digital transformation.
Upcoming priorities for the consortium include:
- Preparing the first public-test version of the auditing tool
- Refining the AI model and expanding its dataset
- Developing the Training Kit for VET providers
- Creating new communication materials for broader dissemination
